OR08 - Transitioning to EPICS while involving users and operators

Tuesday, 12 September 2023 16:30 (30 minutes)

The control system of the ISIS Neutron and Muon Source is being moved to EPICS from the current Vsystem control system. This transition affects many different areas of the control system from servers to hardware interfaces. But the most relevant for users and operators are the areas concerning the control screens, alarm displays and data archiving. Early involvement from machine physicists and operators was encouraged in order to not just ease the transition but also to implement their current requirements and preferences into the new control system and give them tools for further development.

Presenter: HERNANDO, Juan Luisa Fernandez (ISIS)

Session Classification: Controls - The Interface between Operator and Accelerator
